PLANTING INSTRUCTIONS

PEONIES

Plant in good average garden soil. Spade up the ground several times as deep and large as the plant to be planted.

Place the eyes 2 to 2½ inches under the level of the ground. Place a handful of bone meal around each plant, mixing it into the soil.

Do not plant near trees or shrubbery. They like plenty of sunshine. Disbud the lateral buds for show flowers.

Cultivate frequently. Cover with straw or other litter the first year to protect from heaving.

IRIS

Plant in good average garden soil to which add some bone meal and crushed limestone.

Plant the roots 2 to 3 inches under the ground and cover the body of the plant with not over an inch of soil.

Plant 12 to 15 inches apart. Reset every three or four years.

They like sunshine, but will flower in partial shade.

All Irises, one-year stock, the best to be had.

Printed Planting Instructions Accompany Every Order

All plants shipped Parcel Post or Express Prepaid.
Orders amounting to less than \$1.00, include 10c extra for Parcel Post.

IRISES

Iris in some form are native to practically all parts of the world. They vary greatly in size, height and coloring in the various countries. As a class they are of extremely easy culture and not particular as to soil. No flowering plant gives so much in beauty for so little cost and attention.

The following list of Tall Bearded Iris offers the newer kinds which, because scarce as yet, are relatively more expensive than the old varieties. Because our list is so extensive we can give only brief descriptions.

Get some of these newer kinds for your garden. You will revel in their beauty and your friends will enjoy kinds they have never seen.
